

PART 4- SIMPLE LENGTH FILTERING EXPERIMENT

- **Tool:** Filter sequences by length
- **Minimum length:** 10,000 bp
- **Input:** Original genome assembly
- **Output:** Sequences ≥ 10 kb only

The screenshot displays the Galaxy web interface with the 'Filter sequences by length' tool (Galaxy Version 1.2) selected. The interface is divided into several sections:

- Left Sidebar:** Contains navigation links for 'Activities', 'Upload', 'Tools', 'GalaxyAI', 'Workflows', 'Workflow Invocations', 'Interactive Tools', 'Notifications', and 'More'.
- Tool List:** A list of tools is shown, including 'Filter sequences by ID from a tabular file', 'Filter sequences by length', 'pRESTO FilterSeq', 'qlime2 feature-table filter-seqs', and 'qlime2 taxa filter-seqs'.
- Tool Parameters:**
 - Fasta file:** A dropdown menu shows '1: Hipposideros_armiger_genome_original.fna.gz (as fasta)'.
 - Minimal length:** A text input field contains '10000'.
 - Maximum length:** A text input field contains '0'.
 - Additional Options:**
 - Email notification:** A toggle switch is set to 'No'.
 - Attempt to re-use jobs with identical parameters?** A toggle switch is set to 'No'.
- Right Panel:** Shows a 'History' section with a search bar and a list of datasets. The top dataset is 'Genome_Exploration_II_Suan_Hipposideros_ar...'.
