

PART 5- SMALL ORF EXPLORATION

The image displays two screenshots of the Galaxy web interface, showing the configuration of the 'getorf' tool (Galaxy Version 5.0.0.1) for finding and extracting open reading frames (ORFs).

Top Screenshot: Tool Parameters

- Sequences:** 14: Hippositeros_armiger_genome_original.fna uncompressed with matched ID
- accepted formats:** (Dropdown menu)
- Code to use:** Standard
- Minimum nucleotide size of ORF to report:** 300
- Maximum nucleotide size of ORF to report:** 1000000
- What to output:** Translation of regions between STOP codons
- ALL START codons to code for Methionine:** Yes

Bottom Screenshot: Additional Options

- ALL START codons to code for Methionine:** Yes
- Circular sequence:** No
- Find ORFs in the reverse complement:** Yes
- Number of flanking nucleotides to output:** 100
- Output sequence file format:** FASTA (m)
- Additional Options:**
 - Email notification:** No (Send an email notification when the job completes)

The right sidebar shows the History panel with a search bar and a list of datasets, including 'Genome_Exploration_II_Suan_Hipposideros_ar...' and 'Hippositeros_armiger_getorf'.
